

CABLAGGI

Company Profile

About Us

C.E.L. Cablaggi Srl was founded in 1969 and operates in the assembly of electrical and electronic components. Fifty years of activity and technological investments allow us to offer our customers a quality product today.

The types of wiring made are many, while our services are structured in such a way as to be able to meet the different needs of the customer, such as the development of projects and the supply of technical documentation.

The company philosophy, aimed at qualitative development through greater involvement of the client companies in the production cycles, represents a strong commitment to providing strict guarantees in terms of service and delivery times.

How we work

C.E.L. Cablaggi intends to pursue a customer care policy with an innovative vision aimed at the priorities and needs of the customer, with the goal of continuously improving the production process through a preventive exchange of information, carefully evaluated and analyzed.

The UNI EN ISO 9001: 2015 Quality System certification confirms the company policy which is inspired by four fundamental points for the management of production processes.

4 Fundamental Points

- Human resources
- Customer satisfaction
- Quality
- Added value

Reg. No. 2818-A UNI EN ISO 001:2015

Sede Legale: Via G. Di Vittorio, 3
40033 Casalecchio di Reno - Bologna ITALY

Unità Operativa: Via Bacchello, 4/6
40050 Monte San Pietro - Bologna ITALY

Fields of Application

C.E.L. Cablaggi has consolidated, in over forty-five years of activity, its production of electrical wiring, with particular attention to small and medium-sized productions

Reliability, flexibility and high quality, combined with an advanced internal computer system, guarantee, at all times, all information and production planning. This plus allows C.E.L. Cablaggi to respond promptly and punctually to customer requests, always respecting the agreed times.

Control tools

The integration of quality control with the application equipment radically improves the manufacturing process.

A good quality control is based on the definition of understandable quality levels and on the verification of each piece produced during its realization. The control devices used make it possible to raise the quality standard because they allow you to inspect the seams, in the different types used, directly during the application phase. Data management and analysis also provide important information for the right preventive maintenance.

The final verification of the wiring connection points takes place through the electrical continuity control, with FASTEST instrumentation. At the end of the test, the device generates a report with the result of the test. All information and references are printed on a label holder as a test proof.

Fields of Application

- Automotive
- Air Conditioning
- Medical
- Industrial
- Robotics
- Heavy Duty Vehicle
- Lift and forklift

Where are we

The registered office of CEL Cablaggi is located in via Giuseppe Di Vittorio, 3 in Casalecchio di Reno, in the province of Bologna, and occupies an area of about 400 square meters.

The production unit is located in via Bacchello 4/6 in Monte San Pietro, in the province of Bologna, with an area of about 1000 square meters, and operates with personnel dedicated to the management of prototype production.

The prospect of new markets is part of an ambitious development project which, in order to offer its customers a competitive service, has determined the need to make use of a production team located in Europe, where one of our major suppliers, through a qualified staff, works constantly supported by a computerized management system.
